- ① Coil will exceed 95° C temperature rise when left on continuously in 25° ambient, but will not be damaged. At maximum ambient temperature of 71°C, the duty cycle should be limited to 15 minutes "on" time per half hour to obtain maximum coil life.
- ② Continuous and intermittent duty ratings shown are for N.O. pole rated at 1/2 the listed continuous DC duty ratings. N.C. pole on 6041H53 and H220 limited to 15 g's shock.
- ③ Time on 1 1/2 minutes at 29 Vdc. Minimum time off is 3 minutes.
- ④ All continuous duty resistive and motor load ratings and all intermittent duty ratings for all 3 pole relays listed under 28 Vdc apply for 120 Vdc systems with all 3 poles of the relay connected in the series.
- ⑤ Pick-up voltage below values shown may cause relay to rapidly cycle on and off (chatter).
- ⑥ Relay must drop-out at voltage value or less and may drop-out at any voltage below the higher voltage noted.

POWER RELAYS — CONTINUOUS DUTY, TYPE II, UNSEALED INTERMITTENT DUTY, TYPE III, UNSEALED

P/N 6046H39

Typical Operation:

All items shown within dotted lines are part of the relay. All other parts external to dotted lines, including switches connected to C1 & C2 customer supplied.

Internal Mechanical Interlocks

Prevents the opposite contacts from transferring when either one of the coils is energized and the respective contacts are closed.

Reversing Operation

Closing either external start/stop switch at C1 or C2 will cause the motor to turn in either direction.

Dynamic Braking Operation

Internal switch provides for dynamic braking current flow through the motor shunt-fields series (SF) 1 and 2. Switch S is mechanically closed when either coil is energized and maintains that position until the alternate coil is energized. Switch S is shown in the last position commanded by external start/stop switch at C1.
